## Air suspension for new Renault Master / Vauxhall Movano

### VB-Airsuspension in final phase of extensive testing cycle

*Blackburn, Lancs – VB-Airsuspension has developed a complete rear air suspension for the new, soon to be launched, Renault Master / Vauxhall Movano. The airsuspension option will be available as an aftermarket fitment in the UK from the launch date of both models.*

Over the past few years, VB-Airsuspension has been secretly working on a new type of airsuspension for the French / English LCV partnership. During this time, countless miles of testing have been completed and the firm is now in the final phase of the testing process.

With camouflaged vehicles, VB-Airsuspension has conducted tests under the most extreme circumstances. VB has worked closely with the manufacturer and was involved in development from the start of the Master / Movano project.

There is a broad product range, suitable for all vehicle variants of the new model. Thus, the chassis cab, panel van and combi / bus versions can all be equipped with air suspension, whether front-or rear wheel driven. In addition, VB-Airsuspension will soon launch a complete 4-Corner air suspension, to allow lowering all-round, for even easier access.

On the current series Renault Master / Vauxhall Movano, a large proportion of the vehicles are equipped with air suspension and this is expected to continue. For applications such as car transporters, wheelchair accessible vehicles, ambulances, animal transportation, mobile workshops and motorhomes airsuspension is an extremely useful feature. The VB-airsuspension systems are specifically developed with optional features to suit the specific application closely.

The benefits of air suspension;

- **Increased comfort**
- **Better drivability**
- **Improved safety**
- **Easier access, by lowering the vehicle**

**\*\* Notes to Editor \*\***

VB Airsuspension was founded in The Netherlands in 1993 by Iginio Voorhorst and Eric Bruil, developing air suspension for light commercial vehicles. The kits fit simply and easily without having to cut, weld or change the existing chassis. They are the one of the market-leading air suspension manufactures in Europe and work with all the major manufacturers, e.g., Mercedes Benz, Ford, Volkswagen, Iveco, Renault and Vauxhall providing kits for line-fitment as well as for sale in the aftermarket.

As well as all European Union member states, VB Airsuspension also deliver products to Switzerland, Turkey, Singapore, China, Australia, USA, Brazil and South Africa.

VB-UK was founded in the summer of 2006, to specifically look after the UK and Ireland and the operation is headed by commercial vehicle chassis-engineering specialist Oliver Drinkwater.
